18 CLATMS

- A medical kit for qualitative or quantitative determination of a drug in a biological fluid, said medical kit comprising:
 - i) a first part coated with a drug conjugate; and
 - ii) a second part which contains a labelled antidrug antibody and is adapted for receiving said biological fluid, wherein said labelled antidrug antibody is labelled with gold material and/or latex particles.
- 2. A medical kit according to claim 1, wherein said drug conjugate is a conjugate between said drug and a protein, peptide, polyamine, ceramide, alkyl chain or carbohydrate.
- 3. A medical kit according to claim 2, wherein said protein is selected from rabbit serum albumin, bovine serum albumin, ovalbumin, gamma globulin and thyro globulin.
- A medical kit according to any one of claims 1-3, wherein said latex particles are coloured.
 - A medical kit according to any one of claims 1-4, wherein said gold material is colloidal gold.
 - 6. A medical kit according to any one of claims 1-5, wherein said drug is selected from antihypertensive, antiviral, antimicrobial, antifungal, antiinflammatory, antitumor and psychopharmaceutical agents, including corticosteroids, mono- to oligosaccharides, vitamins, provitamins and hormones.
- 7. A medical kit according to any one of claims 1-6, wherein said drug has a molar weight in the range of from 50 to 6000 g/mol, preferably from 100 to 1000 g/mol.
 - A medical kit according to claim 7, wherein said drug is selected from lisinopril, amilodipine, captopril,

enalapril, enalaprilat, ketotifen, sildenafil and fluoretine.

- 9. A medical kit according to any one of claims 1-8, wherein said second part is a container which either contains a solution of said labelled anti-drug antibody or has its interior at least partially coated therewith.
 - 10. A medical kit according to any one of claims 1-9, wherein said first part has the shape of a stick, strip, paddle or plate.
 - 11. A medical kit according to claim 10, wherein said first part has the shape of a Nunc-Immuno TM Stick.
 - 12. A medical kit according to any one of claims
 1-11, wherein said first part has a surface of a material
 selected from polystyrene, polypropylene, nitrocellulose
 material chemically treated for maximum binding.
 - 13. A medical kit according to claim 12, wherein said material is that used for the surface of a Nunc-Immuno TM Stick.
- 14. A medical kit according to claim 9, wherein said container is tube-shaped.
 - 15. A medical kit according to any one of claims 1-14, wherein said biological fluid is blood, serum or urine.
- 16. A method for qualitative or quantitative deter-25 mination of a drug in a biological fluid, wherein a first part i) as defined in any one of claims 1-13 and a labelled anti-drug antibody are utilised.
 - 17. A method according to claim 16, wherein said first part is placed inside a second part (i) as defined in any one of claims 1-14, wherein said second part contains said biological fluid, wherein said first part is removed from said second part after a predetermined period of time.

10

- 18. A method according to claim 17, wherein said predetermined period of time is in the range of from 5 to 60 minutes.
- 19. A method according to any one of claims 16-18, wherein said first part is subsequently developed in order to bring about a potential colour change indicating the level of said drug in said biological fluid.
 - 20. A method according to any one of claims 16-19, wherein the method in its entirety is performed at ambient temperature.
 - 21. A method according to any one of claims 16-20, wherein said biological fluid is blood, serum, urine or saliva.
